

Stacking Delta Conyne Kites

DC's are easy to stack!

Connect your flying line to the first or top kite.

Ten feet lower on the line attach a small carabiner to the line.

Pass the flying line through the opening of the second kite and then connect the kite to the line by snapping the carabiner into the bridle loop.

Make sure the line goes *under* the cross spreader on each kite in the stack.

When the line is taught, the tension will keep the carabiner in place.

Stack as many kites as you like!

Remember that more kites mean more pull. For ten kites, #500 line will be required.

Have fun!
