

G-Kites Banner Instructions:

1) Your 8 foot banner will fit well on an 8.5 or 9 foot pole. We recommend a length of thick-walled PVC pipe available at any hardware store. Make sure the top of the pole does not have sharp edges. You can protect your banner by covering the top of the pole with tape.

2) Slip the elastic bungee loop around the pole and slide the pole up inside the black fabric sleeve at the edge of the banner. The bungee will keep the banner from sliding up or blowing off.

Alternatively, you can slide the pole into the banner, and then tape the bungee to the bottom of pole.

3) To mount the banner, use a 3-foot piece of metal pipe or rebar as an anchor stake. Make sure the stake is narrow enough to fit inside the hollow banner pole.

Hammer the anchor into the ground at least one foot. Then slide the pole over the stake.
